THE DATA · GRANITE PEAK - CALLS

A week of calls at a glance.

DATE	AGENT	DIR	CALLER	TIME	OUTCOME	VERIFIED
Mon	joanne	in	··0101	3:12	answered	yes
Mon	joanne	out	··0187	1:48	answered	yes
Tue	jim-bob	out	··0133	0:31	voicemail	no
Wed	hattie-mae	in	··0144	2:05	answered	no

Read the odd ones first.

BUILD IT · SAY THIS

A table, a workflow, three URLs.

Say this · Claude Code in the Agent Kit

```
> Build an n8n workflow called Granite Peak - Call log. A webhook receives Leadlock's post-call webhook and saves one row per call to a new data table called Granite Peak - Calls: the date, the agent (from ?agent= on the URL), direction, the last 4 digits of the caller's number, duration, outcome, the summary, and verified (look up the call_sid in Granite Peak - Verifications). Publish it and give me the production URL.
```

Say this · Claude Code in the Agent Kit

```
> Turn on the post-call webhook on the three Granite Peak agents, using that URL with ?agent=joanne, ?agent=jim-bob and ?agent=hattie-mae.
```

TEST IT · SAY THIS

Test it without a call.

Say this · Claude Code in the Agent Kit

> Send a sample post-call payload to that URL with ?agent=joanne, show me the row it saved in Granite Peak - Calls, then delete the row.

THEN A REAL ONE
